CURRICULUM VITAE

Stefan *Popov*.

Software Development Engineer & Technical Founder

hello@stefanpopov.dev · github.com/stefashkaa · LinkedIn

I build software and lead engineering teams. My work spans front-end architecture, product delivery, developer tools, browser extensions, and web and mobile applications.

Open to software engineering and engineering leadership roles, product development, and technical consulting.

Experience

Independent work

January 2025-present

Individual Entrepreneur / Software Development Consultant

Hands-on product development and technical consulting through my own business.

- Develop web applications, front-end systems, and integrations for clients, from technical planning through implementation and handover.
- Work on software architecture, backend and infrastructure planning, AI integrations, and blockchain applications.
- Create and maintain developer tools including Phone Mask, DeSource Image, Context7 Widget, and Browser AI.

TypeScript, JavaScript, Vue, Nuxt, React, Angular, Svelte, Node.js, Docker, cloud platforms

Soramitsu

January 2020-2026

Head of Front-end Development

May 2024-2026

Front-end Team Leader

January 2021-May 2024

Senior Front-end Developer

January 2020-January 2021

Progressed from senior engineering to leading the front-end department, while continuing implementation and code review.

- Created the front-end department and established its structure, engineering workflows, and quality standards.
- Built shared design-system foundations and helped migrate projects to a common front-end technology stack.
- Hired and mentored developers, coordinated roadmaps and delivery, and supported collaboration across product, design, and engineering.
- Organized internal meetups and knowledge-sharing sessions, and contributed to technical direction across company projects.

TypeScript, JavaScript, Vue, Nuxt, Vite, SCSS, design systems, front-end architecture

Earlier experience

Sitronics Telecom Solutions

June 2019-January 2020

Senior Front-end Developer

Front-end development for partnership platforms, working with analysts, designers, and QA.

- Implemented features and business logic from requirements and design layouts, with responsive and cross-browser behavior.
- Improved application architecture, maintained existing code, and contributed to review, CI/CD, and client delivery.

Angular 7, TypeScript, JavaScript, HTML, LESS, Jenkins

OWN.space

February-August 2019

Software Development Engineer · Contract

An industrial natural-language understanding project combining backend and front-end work.

- Implemented language-processing algorithms as Python microservices and built an Angular application to demonstrate them.
- Developed an internal compatibility-verification tool for the delivery process.

Python, Flask, PostgreSQL, NLTK, spaCy, Selenium, Angular, TypeScript

CQG

May 2017-August 2018

Software Development Engineer

Software engineering for CQG Desktop, a browser-based trading platform.

- Implemented interface and business-logic changes, fixed defects, and contributed to restructuring existing software.
- Developed unit and integration tests and helped plan test scenarios for trading-platform functionality.

TypeScript, JavaScript, Angular, C#, .NET, SQL, LESS

Education

Postgraduate degree · Computer Science · 2021-2024
Samara State Aerospace University

Master's degree · Software Engineering · 2018-2020
Innopolis University

Bachelor's degree · Computer Science · 2014-2018
Samara State Aerospace University
